

## Duplicate Bill of Materials

Modified by Phil Loughhead on Jun 15, 2017

Often, a new version of a Bill of Materials (BOM) only differs slightly from a previous version. Perhaps a manufacturer component was changed, or a new supplier component was approved and added. In such cases, creating a duplication of a BOM, making the required changes, and re-releasing is often the desired approach.

A BOM can be duplicated from one product version to another and across different products if required.
